## KING SPRINGS MASTER CATALOGUE

### PRODUCT INFORMATION

There are 3 major reasons why springs are replaced

#### 1. Height

There are 3 options when changing vehicle ride height.

a. **To lower the vehicle (Cosmetic Enhancement):**

- i. The road
- ii. The tyres
- iii. The suspension bump stops

For these reasons, performance replacement springs should be fitted.

b. **To maintain of return vehicle to standard height:**

Most common when original springs have sagged or previously fitted lowered springs are no longer required.

c. **To raise the vehicle:**

Common in 4WD vehicles, heavily laden vehicles, LPG, towing or whenever increased ground clearance is required.

#### 2. Handling

When improvement in handling is required, king springs performance replacement springs will substantially reduce body roll and improve vehicles stability.

King springs performance lowered springs will also lower a vehicles centre of gravity.

#### 3. Heavy Loading

All vehicles are manufactured to a general acceptable standard and springs are no exception to this rule. With demands for comfort a growing priority, spring rates are kept as low as possible. For his reason, the original spring's ability to carry load and tow etc is, in most cases, poor.

King Springs performance replacement springs will decrease the vehicle's ride height loss under load and improve vehicle stability when laden.

King Springs performance replacement coil springs will achieve improvement in any or all of the above areas.

### Height options (generalisation options)

**SUPER LOW = Approximately 50mm Low**

**LOW = Approximately 30mm Low**

**STANDARD - Approximately standard plus 10mm**

**RAISED = Approximately standard plus 20-30mm**

For more specific recommendations call our Hotline on +61 7 55396700. NOTE: Kings Super Low & Ultra Low sports replacement coil spring range is designed primarily for cosmetic enhancement (show cars etc). These parts may therefore render your vehicle illegal for use on public roads. Super low springs lower vehicle approximately 10-15mm lower than normal low ultra low a further 10-15mm again. Toyota Lancruiser 80-100 series and Nissan Patrol GQ-GU "SP3- 4 - 5 & 7" Fronts and "SP3- 4 - 5 & 7" rear raised springs are available and lift the vehicle approximately 3",4",5" and 7" respectively. Depending on load, these parts may render the vehicle illegal for use on public roads. Modifications may be necessary to brake lines shock absorbers etc. These part No's are not covered by king springs general warranty and conditions.

### Progressive Rate (the facts)

King Springs are leaders in progressive rate coil spring technology. We incorporate both tapered wire and variable pitch in many of our designs where necessary to gain maximum achievable benefit in ride comfort, handling and varying load carrying capacity.
